

Working Group „Transport“ (AKB)

in the German-Swiss Association for Radiation Protection

Worldwide transports require
harmonized regulations

Members:

The members of the working group come from all fields of activities concerned with the transport of radioactive material:

- industry
- operators for nuclear facilities
- universities and research institutions
- authorities and regulatory bodies
- logistic service providers
- training organizations
- other institutions

Our aim is to monitor the national and international regulations concerning the transport of radioactive material and to comment on the further development of these regulations. We also support specialist training of personnel involved in the transport of radioactive material.

We participate in the 2-year revision process of the dangerous goods regulations, and put forward recommendations for amendments, as well as offering practical solutions to the day-to-day problems which may occur in the implementation of the regulations.

You are interested in the topic „transport of radioactive material“ and like to join our working group?

The working group meets twice a year with the aim of

- exchanging information and experience,
- discussing arising problems and to develop adequate solutions,
- preparing tools and supplies for the transport of radioactive material,
- proposing modifications for further development of radiation protection and dangerous goods regulations.

You are kindly invited to join us.

Please contact the secretary of the AKB.
