

**Working Group
„Legal Affairs“ (AKR)
in the German-Swiss Association for Radiation Protection**

Regulations as laws, decrees, ordinances and guidelines: the field of radiation protection is full of them. More regulation = more safety? This equation is by far not always valid.

The AKR comprises lawyers, members from authorities, engineers, natural scientists with much experience in implementing radiation protection regulations. We want to play a part in the development of the radiation protection regulations on national and international basis with discussions, comments, the exchange of experience and information.
